About SYG Hospitality

SYG Hospitality is a Netherlands-based hotel supply and procurement company supporting hospitality projects across Europe. Through our network of established manufacturers in Türkiye and selected European partners, we provide an extensive range of products for hotels, resorts, serviced apartments, restaurants, spas and other hospitality establishments.

Our portfolio includes bed and bath linen, mattresses and bedding products, guest amenities, in-room equipment, bathroom accessories, housekeeping solutions, food and beverage products, hotel furniture, and selected operational supplies. In addition to our standard product range, we offer project-based sourcing and custom manufacturing for developments that require specific dimensions, materials, colours, designs, performance standards or brand requirements.

We understand that every hospitality project has its own operational priorities, design identity, budget and delivery schedule. For this reason, we do not limit our clients to a single manufacturer or a fixed catalogue. We evaluate each requirement individually and identify the most suitable products and production partners according to the project's technical specifications, quality expectations and commercial objectives.

Our Mission

Our mission is to simplify hotel procurement by giving hospitality professionals access to reliable manufacturers, competitive sourcing and coordinated project support through a single point of contact. We aim to deliver products that combine quality, functionality, durability and commercial value while reducing the complexity of working with multiple suppliers.

Our Vision

Our vision is to become a trusted European procurement and supply partner for hospitality projects of every scale. We seek to build long-term relationships with hotel owners, developers, operators, architects and procurement teams by providing transparent communication, dependable delivery and solutions tailored to each project.

Our Approach

SYG Hospitality operates through a flexible combination of direct supply, custom production and project-based sourcing. Depending on the product category and project requirements, we work with specialised manufacturers and suppliers selected for their production capabilities, quality standards, reliability and ability to meet the required delivery programme.

Our support can cover the complete procurement process, including product selection, manufacturer identification, quotation management, specification review, customisation,

sample coordination, production follow-up, quality control, consolidation and delivery planning.

For large hotel openings and renovation projects, we can organise products into structured procurement packages such as Bed & Bath, Complete Guestroom and Turnkey Room solutions. This allows clients to source multiple product categories efficiently while maintaining control over quality, budget and project deadlines.

Our Commitment

We are committed to providing:

- Carefully selected products and manufacturing partners
- Solutions adapted to project specifications and budgets
- Clear and responsive commercial communication
- Customisation and private-label production options
- Coordinated sampling, production and delivery
- Consistent quality and reliable long-term support
- One point of contact across multiple product categories

At SYG Hospitality, our role extends beyond supplying products. We work as a sourcing and procurement partner, helping our clients turn their operational, technical and design requirements into practical hospitality solutions.

How We Work

At SYG Hospitality, we combine direct supply, custom manufacturing and project-based sourcing to deliver solutions tailored to each hospitality project. Our flexible approach allows clients to source multiple product categories through one point of contact while maintaining control over quality, specifications, budget and delivery schedules.

1. Project Discovery

We begin by understanding the project's scope, hotel category, room mix, design concept, operational requirements, target budget and opening schedule. When available, we review the Bill of Quantities, technical specifications, drawings, brand standards and mood boards.

2. Product and Supplier Selection

Based on the project requirements, we identify suitable products and evaluate specialised manufacturers within our supply network. We are not limited to a single manufacturer or a fixed catalogue. This enables us to compare different quality levels, production capabilities, customisation options and commercial terms.

3. Tailored Proposal

We prepare a structured proposal containing selected products, technical specifications, available options, quantities, lead times and commercial terms. Where appropriate, we offer Essential, Premium and Luxury alternatives to support different operational and budget requirements.

4. Sampling and Approval

Physical samples, material swatches, colour options and prototypes can be arranged before mass production. Custom-made products are developed according to the approved specifications. Production begins only after the required samples and technical details have been confirmed.

5. Production and Quality Control

Throughout production, we coordinate with the selected manufacturers and monitor progress against the agreed specifications and schedule. Depending on the product and project scope, quality-control checks can be arranged before dispatch.

6. Consolidation and Delivery

Products from different manufacturers can be coordinated and, where practical, consolidated into an organised delivery plan. We support packaging, documentation, freight coordination and phased deliveries according to the project schedule and agreed Incoterms.

7. After-Sales Support

Our involvement continues after delivery. We assist with delivery discrepancies, product-related issues, warranty coordination, replacement requirements and repeat orders. Product specifications can also be retained to support future replenishment and consistency.

One Partner, Multiple Solutions

Whether the requirement involves a single product category or a complete hotel-opening package, SYG Hospitality provides one commercial and operational point of contact from initial selection through final delivery.
